U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)

DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 77-93 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 5,608,556. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims are broader except for the inclusion of "a surface of the pixel electrode facing the liquid crystal layer is substantially flat" which is well known to be a conventional design as is also disclosed as such in Figure 2 of the prior art in Applicant's specification.

Response to Arguments

Applicant's arguments filed 6/27/05 have been fully considered but they are not persuasive. In the last paragraph of page 7 of Applicant's arguments, Applicant argues that the

Page 3

Art Unit: 2877

limitation an "inter-layer insulation film" having a sufficient thickness to alleviate an influence on the liquid crystal layer from an electric field generated by the thin film transistors, the gate lines, and the drain lines is patentably distinct from the '556 patent. The Examiner respectfully disagrees. The '556 patent shows in claim 1 that the interlayer insulating film is 3 microns thick which is thick enough to alleviate an influence on the liquid crystal layer from an electric field generated by the thin film transistors, the gate lines, and the drain lines. This is evidenced by the specification and claims 78 and 79 of the present application which state that the interlayer insulating layer is at least 0.5 and 1.0 microns thick, thus the 3 microns of the '556 patent is sufficiently thick enough to alleviate the influence of the electric field.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
